

逐步构建过程

$X_s = XQ_s + E_{1,s}$ 找出选择矩阵 Q_s

$$\begin{aligned} \min_{Q_s} \quad & \sum_{s=1}^S \|Q_s\|_F^2 + \sum_{s=1}^S \|Z_{1,s}\|_{2,1} \\ \text{s.t.} \quad & X_s = XQ_s + E_{1,s} \end{aligned}$$

加入低秩表示投影和HSIC约束

$$\begin{aligned} \min_{P, Z, Q, E_1, E_2} \quad & \sum_{s=1}^S \|Z_s\|_* + \beta \sum_{s=1}^S \|Q_s\|_F^2 + \gamma \sum_{s=1}^S \|E_{1,s}\|_{2,1} + \delta \sum_{s=1}^S \|E_{2,s}\|_{2,1} \\ & + \kappa \sum_{s=1}^S \|P_s X Q_s - P_s X Q_s Z_s\|_F^2 + \lambda \sum_{s \neq t} \text{HSIC}(Z_s, Z_t) \\ \text{s.t.} \quad & X_s = XQ_s + E_{1,s}, XQ_s = XQ_s Z_s + E_{2,s}, P_s^T P_s = I \end{aligned}$$

引入辅助变量 $J, Z=J$

$$\begin{aligned} \min_{P, Z, Q, E_1, E_2, J} \quad & \sum_{s=1}^S \|Z_s\|_* + \beta \sum_{s=1}^S \|Q_s\|_F^2 + \gamma \sum_{s=1}^S \|E_{1,s}\|_{2,1} + \delta \sum_{s=1}^S \|E_{2,s}\|_{2,1} \\ & + \kappa \sum_{s=1}^S \|P_s X Q_s - P_s X Q_s Z_s\|_F^2 + \lambda \sum_{s \neq t} \text{HSIC}(Z_s, Z_t) \\ \text{s.t.} \quad & X_s = XQ_s + E_{1,s}, XQ_s = XQ_s Z_s + E_{2,s}, Z_s = J_s, P_s^T P_s = I \end{aligned}$$

构建增广拉格朗日函数

$$\begin{aligned}
& \mathcal{L}(P, Z, Q, E_1, E_2, J, Y_1, Y_2, Y_3) \\
&= \sum_{s=1}^S \|JJ_s\|_* + \beta \sum_{s=1}^S \|Q_s\|_F^2 + \gamma \sum_{s=1}^S \|E_{1,s}\|_{2,1} + \delta \sum_{s=1}^S \|E_{2,s}\|_{2,1} \\
&+ \kappa \sum_{s=1}^S \|P_s X Q_s - P_s X Q_s Z_s\|_F^2 + \lambda \sum_{s \neq t} \text{HSIC}(Z_s, Z_t) \\
&+ \frac{\mu}{2} \|X_s - X Q_s - E_{1,s} + \frac{Y_1}{\mu}\| \\
&+ \frac{\mu}{2} \|X Q_s - X Q_s Z_s - E_{2,s} + \frac{Y_2}{\mu}\| \\
&+ \frac{\mu}{2} \|Z_s - J_s + \frac{Y_3}{\mu}\|
\end{aligned}$$

HSIC约束选择内积核函数 $K_s = Z_s^T Z_s$

$$\sum_{t=1, t \neq s}^S \text{HSIC}(Z_s, Z_t) = \sum_{t=1, t \neq s}^S \text{Tr}(H K_s H K_t) = \sum_{t=1, t \neq s}^S \text{Tr}(Z_s H K_t H Z_s^T) = \text{Tr}(Z_s K Z_s^T)$$

其中: $H = I - \frac{1}{n} 11^T$ 是中心化矩阵, $K_t = Z_t^T Z_t$, $K = \sum_{t=1, t \neq s}^S H K_t H$

每次固定一个工况, 拉格朗日函数可以重写为:

$$\begin{aligned}
& \mathcal{L}(P, Z, Q, E_1, E_2, J, Y_1, Y_2, Y_3) \\
&= \|J_s\|_* + \beta \|Q_s\|_F^2 + \gamma \|E_{1,s}\|_{2,1} + \delta \|E_{2,s}\|_{2,1} \\
&+ \kappa \|P_s X Q_s - P_s X Q_s Z_s\|_F^2 + \lambda \text{Tr}(Z_s K Z_s^T) \\
&+ \frac{\mu}{2} \|X_s - X Q_s - E_{1,s} + \frac{Y_1}{\mu}\| \\
&+ \frac{\mu}{2} \|X Q_s - X Q_s Z_s - E_{2,s} + \frac{Y_2}{\mu}\| \\
&+ \frac{\mu}{2} \|Z_s - J_s + \frac{Y_3}{\mu}\|
\end{aligned}$$

更新

1. J ...

2. Z

$$\min_Z$$

```
kappa*tr((P*X*Q-P*X*Q*Z)*(P*X*Q-P*X*Q*Z)')
+mu/2*tr((X*Q-X*Q*Z-E2+Y2/mu)*(X*Q-X*Q*Z-E2+Y2/mu)')
+mu/2*tr((Z-J+Y3/mu)*(Z-J+Y3/mu)')
+lambda*tr(Z*K*Z')
```

function:

$$\begin{aligned} f = & \text{kappatr}((PXQ - PXQZ)(PXQ - PXQZ)^\top) \\ & + \mu/2 \text{tr}((XQ - XQZ - E2 + Y2/\mu)(XQ - XQZ - E2 + Y2/\mu)^\top) \\ & + \mu/2 \text{tr}((Z - J + Y3/\mu)(Z - J + Y3/\mu)^\top) \\ & + \text{lambdatr}(ZKZ^\top) \end{aligned}$$

gradient:

$$\begin{aligned} \frac{\partial f}{\partial Z} = & \mu(Z - J + 1/\mu Y3) - 2\kappa(PXQ)^\top(PXQ - PXQZ) \\ & - \mu(XQ)^\top(XQ - XQZ - E2 + 1/\mu Y2) \\ & + \lambda ZK^\top + \lambda ZK \end{aligned}$$

let =0

$$\begin{aligned} Z_{\text{set}\{i\}} = & \left(\mu + 2\kappa (P_{\text{set}\{i\}} XQ_{\text{set}\{i\}})^\top P_{\text{set}\{i\}} XQ_{\text{set}\{i\}} - \mu (XQ_{\text{set}\{i\}})^\top XQ_{\text{set}\{i\}} \right. \\ & \left. + \lambda (K^\top + K) \right)^{-1} \\ & \left(\mu J_{\text{set}\{i\}} - Y_{3\text{set}\{i\}} + 2\kappa (P_{\text{set}\{i\}} XQ_{\text{set}\{i\}})^\top P_{\text{set}\{i\}} XQ_{\text{set}\{i\}} \right. \\ & \left. - \mu (XQ_{\text{set}\{i\}})^\top XQ_{\text{set}\{i\}} + \mu (XQ_{\text{set}\{i\}})^\top E_{2\text{set}\{i\}} - Y_{2\text{set}\{i\}} \right) \end{aligned}$$

3. P ...

4. Q

$$\min_Q \beta \|Q_s\|_F^2 + \kappa \|P_s X Q_s - P_s X Q_s Z_s\|_F^2 + \frac{\mu}{2} \|X_s - X Q_s - E_{1,s} + \frac{Y_1}{\mu}\|_F^2 \\ + \frac{\mu}{2} \|X Q_s - X Q_s Z_s - E_{2,s} + \frac{Y_2}{\mu}\|_F^2$$

function:

$$f = \text{betatr}(Q Q^\top) + \text{kappatr}((P X Q - P X Q Z)(P X Q - P X Q Z)^\top) \\ + \mu/2 \text{tr}((X Q - X Q Z - E2 + Y2/\mu)(X Q - X Q Z - E2 + Y2/\mu)^\top) \\ + \mu/2 \text{tr}((X_s - X Q - E1 + Y1/\mu)(X_s - X Q - E1 + Y1/\mu)^\top) \\ + \mu/2 \text{tr}((X Q - X Q Z - E2 + Y3/\mu)(X Q - X Q Z - E2 + Y3/\mu)^\top)$$

gradient:

$$\frac{\partial f}{\partial Q} \\ = 2\text{beta}Q + 2\text{kappa}(P X)^\top (P X Q - P X Q Z) \\ - 2\text{kappa}(P X)^\top (P X Q - P X Q Z) Z^\top + \mu X^\top (X Q - X Q Z - E2 + 1/\mu Y2) \\ - (2\mu)/2 X^\top (X Q - X Q Z - E2 + 1/\mu Y2) Z^\top - \mu X^\top (X_s - X Q - E1 + 1/\mu Y1) \\ + \mu X^\top (X Q - X Q Z - E2 + 1/\mu Y3) - (2\mu)/2 X^\top (X Q - X Q Z - E2 + 1/\mu Y3) Z^\top$$

梯度下降法更新Q

```
% 假设已定义所需的变量: P, X, Z, E2, E1, Y2, Y3, J, Y1, mu, kappa, lambda, beta
```

```
% 初始化 Q, 设置初始值
```

```
Q = initial_Q; % initial_Q 为 Q 的初始值, 应该根据实际情况设定
```

```
learning_rate = 0.01; % 设置学习率 alpha
```

```
max_iter = 1000; % 最大迭代次数
```

```
tolerance = 1e-6; % 梯度下降的停止条件
```

```
% 迭代进行梯度下降
```

```
for iter = 1:max_iter
```

```
    % 计算目标函数关于 Q 的梯度
```

```
    grad_Q = 2 * beta * Q + 2 * kappa * (P * X)' * (P * X * Q - P * X * Q * Z) ...  
        - 2 * kappa * (P * X)' * (P * X * Q - P * X * Q * Z) * Z' ...  
        + mu * X' * (X * Q - X * Q * Z - E2 + 1 / mu * Y2) ...  
        - mu * X' * (X * Q - X * Q * Z - E2 + 1 / mu * Y2) * Z' ...  
        - mu * X' * (X_s - X * Q - E1 + 1 / mu * Y1) ...  
        + mu * X' * (X * Q - X * Q * Z - E2 + 1 / mu * Y3) ...  
        - mu * X' * (X * Q - X * Q * Z - E2 + 1 / mu * Y3) * Z';
```

```
    % 更新 Q
```

```
    Q = Q - learning_rate * grad_Q;
```

```
    % 判断收敛条件 (梯度的范数小于容忍度)
```

```
    if norm(grad_Q, 'fro') < tolerance
```

```
        fprintf('梯度下降法已收敛, 迭代次数: %d\n', iter);
```

```
        break;
```

```
    end
```

```
end
```
